The fleet, the technology, the service

Transport Solutions

AV Dawson's road transport solutions are industry and customer specific. They are intended to add value, deliver cost savings and service level benefits to your supply chain.

Our Transport Office is supported by integrated fleet and road management software. Using a national grid of radio links, we can pinpoint the location of any vehicle in our fleet to within thirty metres and we have real time information on its speed, direction and ETA. This gives us the reliability and efficiency that are necessary for *just-in-time* delivery systems demanded by many clients.

Setting the Standards

Our policy to operate only vehicles of five years old and under combined with on-site and dealership based service and support guarantees fleet reliability. This also reflects our commitment to the environment, with the use of the latest technology which meets current European legislation.

Our wide-ranging fleet includes 44 tonne gross capacity vehicles and trailers including curtainsiders, bulk tippers, covered coil trailers, specialist steel carrying flat trailers up to 23m long and container carriers.

With our level of expertise in this field and associated technology we have the ability to manage the transport function on behalf of existing and potential customers.

Road haulage will continue to play a vital role in our integrated transport and distribution operations, complementing our rail, shipping and warehousing facilities.
